pBluescript SK; Site_1: EcoRI; Site_2: xhoI; Seeds were
surface-sterilized, germinated and grown aseptically in
the dark at room temperature on filter paper with water,
nystatin and cefotaxime in covered crystallization
dishes Roots were harvested. The tissue, total RNA, and
poly(A) RNA were prepared, a cDNA library was made in the
TJ Close lab (Choi, Close, Fenton) at the University of
California, Riverside. The cDNA clones were in vivo
excised to give pBluescript phagemids before
normalization was carried out. The mass excision of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     normalization was carried out. The mass excision of phagemid library and normalization were done in HT Nguyei lab by D. Zhang at Texas Tech University. Normalization protocol used was that of Soares. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conservative
/Clone_lib-"Entamoeba histolytica Sheared DNA"
/note-"Vector: pHOS1; Site_1: Bst I; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tight size distribution (-2 kb). The v + 1 method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

The pullulanse hydrolyses alpha-1.6-glycosidic bonds of amylopectin and of pullulan. The enzyme can be used (with glucoamylope) for saccharification of starch. Typical applications include use as anti-stailing additives in bread making and brewing, in preparation of low calorie foods and to clarify fruit juices.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ranges, also related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents Bacillus deramificans strain TR9.117D mature pullulanase (BC-3.2.1.41). This enzyme has a pI of CC 4.14.5, has a half-life of about 55 hr at 60 deg C and is capable CC of catalysing the hydrolysis of alpha-1,6-glucosidic bonds in CC amylopectin and pullulan. The invention relates to the discovery CC that B. deramificans pullulanase recombinantly produced in a Bacillus host is modified yet retains the ability to catalyse the CC hydrolysis of an alpha-1,6-glucosidic bond. The modification of CC the recombinant pullulanase appears to be a result of misprocessing CC of the signal sequence by a signal peptidase as well as susceptibility to extracellular proteolytic processing. The CC invention provides modified pullulanases, especially N-terminally CC truncated B. deramificans modified pullulanases (see y31747-48), CC nucleic acids encoding them, vectors, host cells and methods for CC recombinant production. The modified pullulanases are useful in CC the starch industry for the saccharification of aqueous liquefied CC starch, forming syrups of high glucose and maltose content. Other CC uses (not claimed) are: as anti-staling additives in bread; in CC uses (not claimed) are: as anti-staling additives in bread; in the preparation of oligosaccharides from amylopectin or of thrain of oligosaccharides from anylopectin or of the reversion maltose; to condense mono- or oligosaccharides, co crim the pharmaceutical industry (no details). When used for starch saccharification, the modified pullulanases reduce the amounts of by-products, especially they provide higher glucose content of the prosessible a higher level of dissolved solids in the material coloning treated, resulting in increased productivity and a more central process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The pullulanse hydrolyses alpha-1,6-glycosidic bonds of amylopectin and of pullulan. The enzyme can be used (with glucoamylase) for saccharification of starch. Typical applications include use as anti-staling additives in bread making and brewing, in preparation of low calorie foods

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                928
```

This sequence represents a pullulanase amino acid sequence. Pullulanases CC are debranching enzymes which can attack amylopectin. This sequence represents a parent enzyme from which genetically engineered variant CC debranching enzymes can be created. The genetically engineered to the CC an improved thermostability at a pH in the range of 4-6 compared to the CC parent enzyme. The modified enzyme may alternatively or also have an CC increased activity towards amylopectin and or glycogen compared to the CC parent enzyme. This is useful when starches yeth as corn, potato, wheat, CC manioc and rice starch are used as starting materials in commercial CC large scale production of sugars, such as high fructose syrup, high maltose syrup, maltodextrins, amylose, G4-66 oligosaccharides and other CC carbohydrates such as fat replacers. The thermostable debranching enzymes of the invention make it possible to perform liquefaction and debranching the thermostable debranching using the thermostable debranching using the thermostable debranching using the with the action of an alpha-amylase, the formation of panose precursors ci is reduced, thereby reducing the panose content in the final product and

increasing

overall saccharification yield.

pullulanase of Bacillus deramificans strain T89.117D, comprising CC amino acids 99-928 of the native mature enzyme (see Y31746). The cathor and in a companies of the native mature enzyme (see Y31746). The cc mature pullulanase (EC-3.2.1.41) has a pI of 4.1-4.5, a cc half-life of about 55 hr at 60 deg C and is capable of catalysing CC the hydrolysis of alpha-1,6-glucosidic bonds in amylopectin and cc pullulan. The invention relates to the discovery that B. C deramificans pullulanase recombinantly produced in a Bacillus host is modified yet retains the ability to catalyse the hydrolysis of CC is modified yet retains the ability to catalyse the hydrolysis of CC an alpha-1,6-glucosidic bond. The modification of the recombinant cc pullulanase appears to be a result of misprocessing of the signal CC sequence by a signal peptidase as well as susceptibility to sequence by a signal peptidase as well as susceptibility to cxtracellular proteolytic processing. The invention provides CC modified pullulanases, especially N-terminally truncated B. CC deramificans modified pullulanases, nucleic acids encoding them, CC vectors, host cells and methods for recombinant production. The condified pullulanases are useful in the starch industry for the saccharification of aqueous liquefied starch, forming syrups of CC anti-staling additives in bread; in brewing low calorie beers; corrected of carrier of fruit in the starch calorie beers; in the preparation of

When used with glucoamylase, they make possible a higher level of dissolved solids in the material being treated, resulting in increased productivity and a more energy-efficient process.

Claim 32; Page -; 49pp; English

The present sequence represents an N-terminally truncated CC pullulanase of Bacillus deramificans strain TB9:117D, comprising CC amino acids 103-928 of the native mature enzyme (see Y31746). The CC native mature pullulanase (EC-3,2.1.41) has a pI of 4.1-4.5, a cC thalf-life of about 55 hr at 60 deg C and is capable of catalysing CC the hydrolysis of alpha-1.6-glucosidic bonds in amylopectin and CC pullulan. The invention relates to the discovery that B. CC is modified yet retains the ability to catalyse the hydrolysis of CC an alpha-1.6-glucosidic bond. The modification of the recombinant CC pullulanase appears to be a result of misprocessing of the signal complete by a signal peptidase as well as susceptibility to extracellular proteolytic processing. The invention provides CC deramificans modified pullulanases, especially N-terminally truncated B. CC deramificans modified pullulanases, nucleic acids encoding them, CC vectors, host cells and methods for recombinant production. The CC saccharification of aqueous liquefied starch, forming syrups of CC anti-staling additives in bread; in browing low calorie beers; CC anti-staling additives in bread; in browing low calorie beers; CC condense and maliose content. Other uses (not claimed) are: as CC condense mono- or oligosaccharides, or in the pharmaceutical CC industry (no details). When used for starch saccharification, the CC condense mono- or oligosaccharides, or in the pharmaceutical CC industry (no details). When used for starch saccharification, the CC they provide higher glucose yields in short reaction times, without as substitute maltose;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       losses associated with reversion reaction products. When use glucoamylase, they make possible a higher level of dissolved in the material being treated, resulting in increased product and a more energy-efficient process.

Note: The present sequence is not shown in the specification derived from the B. deramificans pullulanase sequence given is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

APC heat resistance;
                                                                                                                                                                                                                                                                      The present sequence represents a trimmed enzyme isolated from Bacillus sp. APC-9603. The present specification also describes: (1) a vector containing the DNA encoding a trimmed enzyme; (2) a recombinant microbe transformed by the DNA; and (3) preparation of a trimmed enzyme in which the microbe of (2) is cultured and the trimmed enzyme is collected from the culture. The method can prepare a trimmed enzyme of wide substrate specificity having heat resistance and being active in acid region efficiently.
                                                                                                                                                                                                                                                                                                                                                                 enzyme
                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

CC This sequence represents a pullulanase amino acid sequence. Pullulanases CC are debranching enzymes which can attack amylopectin. This sequence CC represents a parent enzyme from which genetically engineered variant CC debranching enzymes can be created. The genetically engineered variant CC an improved thermostability at a pH in the range of 4-6 compared to the CC parent enzyme. The modified enzyme may alternatively or also have an CC increased activity towards amylopectin and or glycogen compared to the CC parent enzyme. The enzyme variants are useful for converting starch to one CC or more sugars. This is useful when starches such as corn, potato, wheat, CC manioc and rice starch are used as starting materials in commercial CC large scale production of sugars, such as high fructose syrup, high high carbohydrates such as fat replacers. The thermostable debranching enzymes CC of the invention make it possible to perform liquefaction and debranching simultaneously before the saccharification step. By debranching using the CC with the action of an alpha-amylase, the formation of panose precursors is reduced, thereby reducing the panose content in the final product angular concerning the overall saccharification yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 29; Fig 3; 116pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QY
This is the amino acid sequence of pullulanase 6GP3, deduced from an isolated polynucleotide (see v36920) of a Thermotoga maritima clone (5GP3) that grows optimally at 85 degC. The sequence shows 72% amino acid identity to an alpha destrom 6 glucanohydrolase of Caldocellum saccharolyticum. The invention provides 18 polynucleotides (see v36907-24) coding for thermostable glycosidases (see w49858-75) having glucosidase, alpha-galactosidase, beta-mannastable glycosidases beta-galactosidase, beta-mannases, endoglucanase or pullulanase activity. Vectors and host cells are also claimed. A method is provided for producing the enzymes by recombinant techniques. A claimed method for generating glucose from soluble

The enzyme or its encoding nucleic acid sequence is used for generating glucose from soluble oligosaccharides. The enzyme can be used in the food processing, pharmaceutical, textile, detergent and baking industries. The enzyme is also used to treat lactose intolerance, as a diagnostic reporter molecule, in corn wet milling or in the fruit juice industry. The enzymes can be used to hydrolyse guar gum to remove non-reducing terminal mannose residues. The nucleic acids encoding the enzyme may be used to generate probes to identify similar sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New thermostable glycosidase(s) - from Thermococcus, Staphylothermus and Pyrococcus, used in the textile, food processing, pharmaceutical, detergent and baking industries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Glycosidase; thermostable; textile; food processing; pharmaceutical; detergent; baking; industry; Thermococcus; Staphylothermus;

Plasmid pTPI conty. the pullanase gene (Japan Patent Apppln. No. 174037/88) was cleaved by various restriction enzymes and inserted into plasmid pVI18/119. Single-stranded DNA was prepd. using helper phage M13K07 and the base sequence determined by the dideoxy method.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence encoding this protein may plasmid.                                                                                                                                                                                                                                                                                                 This sequence represents the Bacillus pullulanase protein. The invention relates to a mutant pullulanase in which at least one methionine residue in the pullulanase is deleted or replaced by an optional amino acid residue other than Cys and Met and/or at least one alanine residue in the amino acid residues constituting pullulanase is deleted or replaced by an optional amino acid residue other than Ala. The mutant pullulanase is useful in bleach-containing detergents. The pullulanase is highly

Bacillus

KSM-AP1378

50;

```
Amylopullulanase (W09255) of Bacillus sp. isolate KSM-AP1378 has N-terminal alkaline alpha-amylase molety (see also W09256) and a C-terminal alkaline pullulanase molety (see also W09257). It is the product of an open reading frame in a DNA fragment (T47878) isolated using shotgun cloning and PCR (see also T47879-84). The
                                                                  DNA encoding alkaline pullulanase having alkaline alpha-amylase activity - useful for improving the efficacy of dish washing detergents and detergents for clothes, esp. on starch soils
                                 Amylopullulanase (W09255) of Bacillus sp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           amylopullulansee, alpha-amylase and pullulanase can each be expressed in transformed host cells using vectors contg. the appropriate gene fragments. The enzymes are useful as additives in dish-washing and clothes detergent compans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
